

uni-SPF Release 1.71

Now Available

We are pleased to announce the availability of release 1.71 of uni-SPF, for Solaris, HP/UX, AIX, and Linux. This release is available on our website for download, or by calling Sales at 800 228 0255.

This maintenance release implements a number of usability improvements, including: platform specific changes, bug fixes, mainframe compatibility improvements, and inclusion of the latest version of the embedded rexx interpreter. Specific changes are:

- Perform numeric comparison in)PROC IF statements when both operands are non-null and numeric. This is the only real public enhancement. I18N support for Linux.
 - Fix TBDISPL error introduced in V1.70 which causes core failures rather easily.
 - Correctly display file name is DELETE confirmation screens.
 - Re-enable processing of scroll amount on command line in conjunction with scroll command.
-
