The Workstation Group, Ltd.

uni-SPF Release 1.75

Now Available

We are pleased to announce the availability of release 1.75 of uni-SPF, for Solaris, HP/UX, AIX, and Linux. This release is available on our website for download, or by calling Sales at 800 228 0255.

This maintenance release implements a number of usability improvements, including: platform specific changes, bug fixes, mainframe compatibility improvements, and inclusion of the latest version of the embedded rexx interpreter. Specific changes are:

- Permit creation of Edit Profile named '<default>' which supplies default profile values in lieu of uni-Spf system defaults.

- 'ispf' shell copies a default Edit Profile table file if no user version exists and a common one does.

- New Edit Profile fixes.

- Diagnostic message fixes.

- Fix mouse support during line mode.

- Integrate usersetprof.rex into utilities.

- Implemented TWGSPF_I18Nmonths() function call to return list of abbreviated month names appropriate to the current locale setting.

- Implement I18N date upgrade for File Search Utility.

- Fix display error.

- Compiled programs able to invoke Edit/Browse services with PROFILE and IMACRO operands.

- Fix return code processing.
